

MASTIC HOT APPLIED POLYMER

PRODUCT IS 100% WATERPROOF!!!

- Equipment required: Mastic Machine, Application Tools and Mastic Material
- Manpower – 3 people
- Preparation – make sure surface is clean and dry
- Areas you can use mastic:
 - Potholes
 - Wide cracks or crack sealing
 - Utility cuts
 - Asphalt/Concrete seam repair
 - Skin patches, alligator crack repair
 - Manhole/Drain/Culvert repairs
 - Repair depressions, ruts & low pavement
 - Level bridges approaches
 - Bridge deck/joint repairs
- Maxwell® Mastic products are not regular sealant and aggregate mixed, the binder is a specially developed polymer to coat aggregate and create a weatherproof barrier on asphalt and concrete repairs.
- All the above will have lasting repairs without having to return frequently, 5-7 years or more before having to repair again.
- Mastic is an investment and the material cost are more than conventional asphalt without having to go back and repair repeatedly.
- There's no cutting of asphalt/concrete, prep area and apply with great results.
- No shave and pave required, this can save on less equipment required and cost.

HOT/COLD MIX ASPHALT

PRODUCT IS NOT WATERPROOF!!!

- Asphalt Hot Mix Transporter, Application Tools
- Manpower – 3 people, depending on size of equipment
- Preparation – make sure surface is clean and dry
- Areas you can use:
 - Potholes – **NOT WATERPROOF**
 - Utility cuts – **NOT WATERPROOF**
 - Manhole/Drain/Culvert repairs **NOT WATERPROOF**
- The list is not as long as the Maxwell® Mastic list, using asphalt to do repairs will cause repeated asphalt repairs with short term results.
- With going back repeatedly is expensive and NOT cost effective.
- Large area's that you would bring in equipment to remove bad asphalt area, is not required for Mastic installation.
- Maxwell Mastic is more cost effective and requires less equipment than conventional asphalt/concrete repairs.
